

Geotechnical & Engineering Geology

VISION

KB-MIC's vision is to develop and maintain a position as the distinguished geological consultancy of choice for both our employees and clients. Our focus will be primarily on Green and Brown field exploration in Africa.

We are considered "Competent Persons" by internationally recognized resource reporting standards (SAMREC, Ni43-101, and JORC) for Coal, Gold and Platinum Group Metals. Other commodities related experience includes Uranium, Copper, Iron-ore and Manganese.

CORE COMPETENCIES

KB-MIC's competitive advantage lies in its ability to offer clients integrated services from target generation through to CPR documentation for public companies.

Geotechnical and Engineering Geology

KB-MIC offers a wide range of geotechnical services that are critical to any major infrastructural development. Our core strengths are in geotechnical mapping, soil profiling and interpretation.

Services Include:

- Preliminary geotechnical investigations
- Regional geotechnical mapping
- Geotechnical core logging
- Engineering geology
- Soil Profiling
- Assessments of potential development zones
